

FTS Accounting 2010

FIRST TRUST SOLUTION

FTS Accounting has many advanced features which are designed to meet various needs of different types of businesses.

There are 4 editions of FTS Accounting:

- FTS Accounting SME:** With a set of essential features. This simplified version is suitable for small businesses in service and retail sectors.
- FTS Accounting Standard:** With all standard features, it has the advantage of quick implementation at a reasonable cost.
- FTS Accounting Professional:** This product is designed to suit companies which have complex business operation model and need a software package that can be tailored to their specific needs.
- FTS Accounting Enterprise:** This product is designed to suit corporations with many offices. It allows centralization of data and management.

THE DIFFERENCES

FTS Accounting is delved to maximize value for customer with the following characteristics:

- Friendliness and ease of use:** Friendly and standard user interface, it focuses on simplicity and reduces learning time.
- Stability:** Employing state of the art technologies, and developed by software professionals in cooperation with highly experienced business consultants, FTS Accounting has been also tested very carefully to minimize defects and downtime.
- Expandability and flexibility:** FTS Accounting allows users to tailor all features from data input to layout of reports to suit the needs of different types of businesses.

REMOTE WORKING

One of the most distinguished features of **FTS Accounting** is the ability to work remotely via Internet, connecting to company network for accessing data.

- Users can carry out data input, view reports; access important financial information during business trips, at home or in anywhere the Internet connectivity is available.
- Furthermore, FTS accounting also provides web based reports using web browsers such as IE and Firefox, enabling management to view financial information without installation of an accounting software.

CENTRALIZED MODEL

FTS Accounting supports centralized implementation model for corporations with offices located in different geographical locations. System is implemented in a central location with other offices accessing data via Internet infrastructure.

- This will reduce investment in building IT infrastructure, and minimize IT running cost.
- Importantly, centralized model allows accessing management data for the whole corporation in a timely manner.

OTHER FEATURES

- Support accounting transactions with multiple currencies, and has the ability to view all reports in the home and second currencies regardless of the transaction currency.
- Support various languages: Vietnamese, English, Japanese and others to come.
- Drill-down features on reporting.
- Data security on functions and types of data.
